SEAMLESS OFFICE EXPANSION: CREBRID LLC DEPLOYS A FUTURE-READY MERAKI NETWORK

CHALLENGE

Crebrid, a fintech-driven lending company specializing in residential transition loans, was expanding into a new office and required a complete network infrastructure to support both current staff and anticipated growth. The buildout included firewalls, switches, access points, UPS, and PDU hardware, as well as primary and backup internet services. However, significant lead times for Meraki equipment posed a risk of delaying the office move-in schedule, potentially impacting operations and employee productivity.

SOLUTION

Viyu designed and delivered a robust, scalable network solution based on Meraki technology. Key components included:

- Meraki Network Design – High-availability firewalls, stacked switches, and multiple access points for optimal coverage.
- Power & Connectivity – APC power hardware and dual internet services to ensure redundancy and uptime.
- Procurement & ISP Coordination – Managed equipment sourcing and connectivity timelines to align with the office buildout.
- Temporary Loaner Equipment – Deployed interim hardware to keep the office online during Meraki supply delays.
- Advanced Configuration – Set up VLANs, DHCP scopes, SSIDs, VPN integration into the vArida tenant, and consistent security policies with the main office.

OUTCOME

Crebrid LLC successfully launched its new office on schedule despite supply chain challenges. The project delivered:

- A fully operational network deployed on time with zero move-in delays.
- Seamless transition from temporary loaner hardware to permanent Meraki equipment once available.
- A secure, scalable network foundation designed to support future growth and expansion.
