ENTOS DESIGN ELEVATES CYBERSECURITY AND LOWERS INSURANCE PREMIUMS WITH ARCTIC WOLF MDR

> *"Partnering with Viyu completely changed the way we approach cybersecurity. Their team didn't just implement security solutions—they helped us mature our entire security posture. We have full visibility and telemetry into our security environment giving us confidence that threats are being monitored and managed around the clock sufficiently. The trust we have in Viyu's service team is unmatched—they have always felt like an extension of our own organization."*

ENTOS DESIGN

CHALLENGE

Entos Design, an innovative architectural and design firm, recognized the increasing cybersecurity risks facing professional services organizations. With intellectual property, client data, and operational continuity at stake, leadership made cybersecurity maturity a strategic priority. They also wanted to reduce rising cyber insurance premiums driven by industry-wide attacks.

Entos Design needed to address two urgent concerns:

- **Improve cybersecurity maturity and proactiveness**: Existing tools lacked the real-time visibility and response capabilities needed to stay ahead of evolving cyber threats.
- **Lower cyber insurance premiums**: Their insurer required stronger security controls to qualify for reduced rates and continued coverage.

Entos Design sought a solution that would not only protect their business but also deliver measurable financial benefits.

SOLUTION

Viyu introduced Arctic Wolf's Managed Detection and Response (MDR) and SOC-as-a-Service (SOCaaS) as the ideal fit.

- The Arctic Wolf platform provided 24/7 monitoring, threat detection, and expert-led remediation support.
- Implementation was seamless and non-disruptive to daily operations.
- The solution offered comprehensive visibility across the firm's entire IT environment, reducing risk from day one.

OUTCOME

Only a few months after onboarding Arctic Wolf, the solution proved instrumental in protecting Entos Design:

- **Ransomware Attack Prevented:** Arctic Wolf identified and contained a potential ransomware threat before it could gain access or cause any damage.
- **Zero Impact on Operations or Data**: No data was exposed, and business operations continued without interruption.
- **Insurance Premiums Reduced:** With MDR in place and risk significantly lowered, Entos Design successfully qualified for reduced cyber insurance rates.

Transform cybersecurity from a liability into a strategic advantage.
